## SECTION 1: GENERAL DESCRIPTION

### 1.1 INTRODUCTION

This publication provides installation information for the ASU-9000 Antenna Switching Unit.

### 1.2 DESCRIPTION

The ASU-9000 Antenna Switching Unit is an interface which allows the TDFM-9000 or TDFM-9300 to be set up as 2 or 3 individual Forestry type radios (VHF main and guard receivers with a single transmit module that can be used for either main or guard). Each main and guard antenna ports are switched to a single antenna allowing only 3 antennas in an installation rather than 6. Mic, audio and PTT lines are also combined such that only 3 positions are required on the audio panel. The TDFM-9000 series radio software has been updated to provide the option to operate with the ASU-9000. Control signals are fed to the ASU-9000 via the RS-232 lines used by the RC-9000 (without affecting remote operation).

**SECTION 2: INSTALLATION INSTRUCTIONS**

**2.1 GENERAL**

The ASU-9000 is to be mounted using the holes provided in the flanges. The unit should be located as close to the TDFM-9000 as possible.

**2.2 OUTLINE DRAWING**
